

Ubiquinol

Supplementation of this active CoQ₁₀ will restore healthy levels of CoQ₁₀ in plasma and organs.

Bodily production and intake through foods are too low to restore the decrease of Ubiquinol due to stress, aging, fatigue, smoking, intensive sport, illness and statins use.

HEART FRIENDLY

▪ Promoting heart health

Ubiquinol is essential for heart health because it provides cellular energy to the heart

Unlike conventional CoQ₁₀, Ubiquinol is an antioxidant and it provides more protection to the heart and it lowers LDL cholesterol (Schmelzer 2011)

▪ Accompanying statin drugs

Ubiquinol is ideal for persons on cholesterol-lowering statin drugs

Statin drugs can reduce the amount of CoQ₁₀ and a drop of CoQ₁₀ in the body can lead to chronic fatigue and muscle pains

SLOWING DOWN AGING PROCESS

▪ Strongest lipid soluble antioxidant

It protects cells against damage from free radicals and oxidative stress, which are associated with the aging process and many age-related conditions

BIO ACTIVE CoQ₁₀ - reduced form

- Critical role in energy production (ATP)
- The strongest lipid-soluble antioxidant
- Over 90% of CoQ₁₀ by healthy people is in the reduced form: Ubiquinol

NATURAL product

- Naturally present in all human body cells

DAILY ENERGY SUPPLIER

▪ Sustaining natural energy

Many describe the energy benefits from Ubiquinol as feeling a lack of tiredness that they usually experience throughout the day

ATHLETES FRIENDLY

No doping substance and efficient for

▪ Aerobic performance

Continuous ATP supply

▪ Mood health and Fatigue

Anti-stress

Recovery from fatigue after training

Decreasing muscle damage

▪ Anaerobic performance

Improving of mean power and peak power

UBIQUINOL LEVELS

▪ *Optimal level is important for those looking to support cardiovascular, liver and neurological health*

▪ Can decline as we age

Both bodily production of CoQ₁₀ as well as bodily conversion of Ubiquinone to UBIQUINOL decline as we age

KANEKA QH™

Ubiquinol

is preconverted CoQ₁₀, ready for immediate utilization in the body

- ❖ 100% Natural yeast fermentation
- ❖ GMO free
- ❖ Allergens free
- ❖ No Doping substance
- ❖ Certified ISO 22000
- ❖ 4 years shelf-life

Oxidized Reduced

KANEKA QH™

Bio-active CoQ₁₀

A Technical INNOVATION

KANEKA established the technological feat to stabilize Ubiquinol (that is easily oxidized in air to Ubiquinone) and KANEKA QH™ is well absorbed by our body as Ubiquinol

SAFE for Human

Naturally present in human body, KANEKA confirmed KANEKA QH™ safety with clinical studies (*) (**)

Packaging

- 1kg or 5kg fiber drum
 - capsules
- (information available upon request)

KANEKA *The natural reference in CoQ₁₀*

Pioneer manufacturer of CoQ₁₀ as a congestive heart failure drug in Japan in the 70's.

Clinical Researchers trust KANEKA for over 35 years

Thousands of clinical trials conducted with CoQ₁₀ and nearly every major trial has been conducted with:

- Kaneka Q10™
- Kaneka QH™ Ubiquinol

Kaneka's CoQ₁₀ products are **all-natural**

Kaneka's CoQ₁₀ are **safe and bio-identical** to the CoQ₁₀/Ubiquinol produced in the human body.
